Set 1 — Doctor Discovery & Slot Booking

Weightage: 25% | Use cases: UC-01, UC-02

Use-Case Flow Specification

Telemedicine Slot Booking & Prescription Portal

Set 1 — Doctor Discovery & Slot Booking | Weightage: 25%

Use Case: UC-02 — Book Consultation Slot *(includes UC-03: Make Payment, owned by Set 2)*

Primary Actor

Patient

Preconditions

- Patient has a registered, authenticated account on the portal.
- Patient has searched and selected a physician by specialty (UC-01).
- At least one open consultation slot exists for the selected physician.

Postconditions

- Success: The slot is reserved exclusively for the patient, payment is captured, and a confirmation with appointment details is recorded and sent.
- Failure: No slot is reserved and no payment is captured; the patient is returned to slot selection.

Main Success Scenario

1. Patient selects an available date/time slot for the chosen physician from the booking calendar.
2. System displays a booking summary (physician, specialty, date, time, consultation fee).
3. Patient confirms the booking request.
4. System temporarily holds the slot and invokes UC-03 (Make Payment); the patient selects a payment method and submits payment.
5. System, via the Payment Gateway, authorizes and confirms the payment.
6. System permanently reserves the slot and marks it unavailable to all other patients.
7. System generates a booking confirmation with a reference ID and sends it to the patient by email/SMS.
8. System schedules encrypted video-link generation (UC-04, Set 3) for delivery before the appointment.
9. Use case ends successfully.

Alternate Flow — 5a. Payment Declined

a. 5a1. System displays a “payment failed” message and warns that the temporary hold will expire.

b. 5a2. Patient is prompted to retry with the same or a different payment method.

c. 5a3. If payment fails again after 2 total attempts, the hold is released, the slot returns to the available pool, and the patient is notified that the booking was cancelled.
