Set 2 — Payment & Booking Changes

Weightage: 25% | Use cases: UC-03, UC-08

Use-Case Flow Specification

Telemedicine Slot Booking & Prescription Portal

Set 2 — Payment & Booking Changes | Weightage: 25%

Use Case: UC-08 — Cancel / Reschedule Slot *(extends UC-02: Book Consultation Slot, owned by Set 1)*

Primary Actor

Patient

Preconditions

- Patient is authenticated and has at least one confirmed, upcoming booking.
- The consultation has not yet started.
- The cancellation/reschedule window defined by clinic policy is still open.

Postconditions

- Success (cancel): The slot is released back to the pool, the physician is notified, and any refund due is initiated.
- Success (reschedule): The original slot is released, a new slot is reserved against the same payment, and both parties are notified.
- Failure: The original booking remains unchanged and the patient is told why the request was rejected.

Main Success Scenario

1. Patient opens “My Appointments” and selects a confirmed upcoming booking.
2. System displays the booking details along with the applicable cancellation and refund policy.
3. Patient chooses either “Cancel” or “Reschedule”.
4. System validates the request against the clinic's cut-off window.
5. If rescheduling, the patient picks a new available slot for the same physician and the system reserves it against the existing payment.
6. If cancelling, the system releases the slot and initiates a refund through the Payment Gateway per the policy tier.
7. System notifies the attending physician of the change.
8. System sends the patient a confirmation with the updated booking reference or refund reference.
9. Use case ends successfully.

Alternate Flow — 4a. Request Outside the Cut-Off Window

a. 4a1. System detects the request falls inside the no-change window (for example, under 2 hours before the appointment).

b. 4a2. System rejects the change and displays the policy reason along with the non-refundable amount.

c. 4a3. Patient may either keep the original booking or cancel without refund; the booking record is updated accordingly and the use case ends.
