Set 3 — Tele-Consultation Session

Weightage: 25% | Use cases: UC-04, UC-05

Use-Case Flow Specification

Telemedicine Slot Booking & Prescription Portal

Set 3 — Tele-Consultation Session | Weightage: 25%

Use Case: UC-05 — Conduct Video Consultation *(includes UC-04: Generate Encrypted Video Link)*

Primary Actor

Patient and Attending Physician

Preconditions

- A confirmed, paid booking exists for the current time slot.
- Both parties are authenticated and hold the single-use encrypted room link.
- Both endpoints meet the minimum bandwidth and grant camera/microphone permission.

Postconditions

- Success: The consultation is completed, session duration and clinical notes are stored encrypted, and the session is marked ready for prescription authoring.
- Failure: The session is marked incomplete, the reason is logged, and the case is queued for rescheduling or refund review.

Main Success Scenario

1. System generates and issues the single-use encrypted room link (UC-04) at least 10 minutes before the scheduled start.
2. Patient and physician each open the link; the system validates the token and the appointment window.
3. System admits the patient to a virtual waiting room and notifies the physician.
4. Physician admits the patient and the encrypted video session begins.
5. System records session start time and streams audio/video over the secured channel.
6. Physician records clinical notes in the consultation form during the session.
7. Either party ends the session; the system records the end time and total duration.
8. System saves the encrypted clinical notes and flags the consultation as complete, enabling prescription authoring (UC-06, Set 4).
9. Use case ends successfully.

Alternate Flow — 5a. Connection Drops Mid-Session

a. 5a1. System detects loss of the media stream for one party and pauses the session timer.

b. 5a2. The affected party is allowed to rejoin using the same single-use link for up to 10 minutes.

c. 5a3. If neither party rejoins within 10 minutes, the system ends the session, marks it incomplete with the recorded reason, and queues it for reschedule or refund review.
