Lab 2: Agile Backlog Creation & Sprint Simulation

Telemedicine Slot Booking & Prescription Portal — Set 1: Doctor Discovery & Slot Booking

Name / SRN: _____ **Jira project:** Telemedicine-Booking-Set1 (key TB)

1. Scope

This backlog is derived only from **Set 1 (Doctor Discovery & Slot Booking)** of the Lab 1 team work: use cases UC-01 (Search Doctor by Specialty) and UC-02 (Book Consultation Slot), requirements FR-002 and FR-003, and the UC-02 flow specification including its payment-declined alternate flow. The payment itself (UC-03) belongs to Set 2 and is only referenced as a hand-off.

2. Epics and User Stories

Epic 1: Doctor Discovery

Description: Enable patients to find suitable physicians by medical specialty and see only those who actually have open consultation slots, so they can start a booking with confidence. (Source: UC-01, FR-002)

ID	Story title	As a	I want to	So that	Priority	Pts
Story 1.1	Search Doctors by Specialty	a patient	search for doctors by medical specialty	I can find a physician suited to my health concern	High	3
Story 1.2	Filter by Real-Time Availability	a patient	filter results to physicians with at least one open slot in the next 7 days	I only see doctors I can actually book	High	5
Story 1.3	View Doctor Profile and Open Slots	a patient	view a doctor's profile and their open consultation slots	I can choose the right doctor and a suitable time	Medium	3
Story 1.4	No-Results Guidance	a patient	see a clear message with suggestions when no doctors match my search	I can adjust my search instead of getting stuck	Low	2

Epic total: 13 story points across 4 stories.

Epic 2: Slot Booking & Reservation

Description: Let patients book a specific video consultation slot, have it held while they pay, reserved exclusively for them once payment is confirmed, and handle payment failure safely. (Source: UC-02, FR-003; includes the hand-off to UC-03 Make Payment, owned by Set 2)

ID	Story title	As a	I want to	So that	Priority	Pts
Story 2.1	Select a Slot from the Booking Calendar	a patient	choose an available date and time slot for my chosen physician from a booking calendar	I can book at a time that suits me	High	5
Story 2.2	Review Booking Summary and Confirm	a patient	review the physician, specialty, date, time and consultation fee before confirming	I am sure of the details before I pay	High	3
Story 2.3	Temporary Slot Hold During Payment	a patient	have my chosen slot held for me while I complete payment	nobody else can take it mid-payment	High	8
Story 2.4	Prevent Double Booking	a patient	have a booked slot disappear from all other patients' availability within 2 seconds	the same slot can never be booked by two people	High	8
Story 2.5	Payment Hand-off and Permanent Reservation	a patient	be taken to payment and have the slot permanently reserved once payment is confirmed	my appointment is guaranteed	High	5
Story 2.6	Booking Confirmation with Reference ID	a patient	receive a confirmation with a reference ID by email/SMS	I have proof of my appointment and its details	Medium	3
Story 2.7	Retry After Declined Payment	a patient	retry with the same or a different payment method (up to 2 attempts) if my payment is declined	a temporary failure does not lose my booking	High	5
Story 2.8	Release Hold and Notify on Failure	a patient	have the hold released and be told the booking was cancelled after repeated payment failure	I know the booking did not go through and the slot returns to the pool	Medium	3

Epic total: 40 story points across 8 stories.

3. Prioritization

Priority reflects user impact. Search, availability and the core booking/reservation integrity stories are High because the portal cannot work without them. Notifications and failure cleanup are Medium. The no-results message is Low because users can still complete a booking without it.

4. Story Points (Fibonacci)

Points reflect relative complexity, effort and uncertainty (0, 1, 2, 3, 5, 8, 13). The two 8-point stories (2.3 slot hold, 2.4 double-booking prevention) carry the most technical risk because they involve concurrency and time-limited holds. Simple UI or messaging stories were given 2–3 points.

5. Sprint Plan (1 week each)

Sprint	Stories	Points	Goal
Sprint 1	Stories 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3	29	Patients can find a doctor and start a booking
Sprint 2	Stories 2.4, 2.5, 2.6, 2.7, 2.8	24	Booking is secure, confirmed and failure-safe

Total backlog: 53 story points across 12 stories.

6. Screenshots

Insert the following Jira screenshots here before submission:

- Backlog showing both Epics and all User Stories
- Story point assignments (Epic panel or backlog view showing points)
- Active sprint board (Sprint 1 and Sprint 2)
- Burndown chart for each sprint

7. Reflection

1. Did your estimations reflect the actual effort?

[Answer after running the sprints]

2. Was your backlog well-prioritized?

[Answer after running the sprints]

3. How did your simulated sprint align with your plan?

[Answer after running the sprints]

4. What insights did the burndown chart give about your team's capacity?

[Answer after running the sprints]
