Lab 6: Code and Branch Coverage Analysis

H K Manaswin | PES1UG24AM108 | Program: L6_L7_42 Salon Booking

Repository: https://github.com/SETAPESU26/L6_L7_42_salon_booking

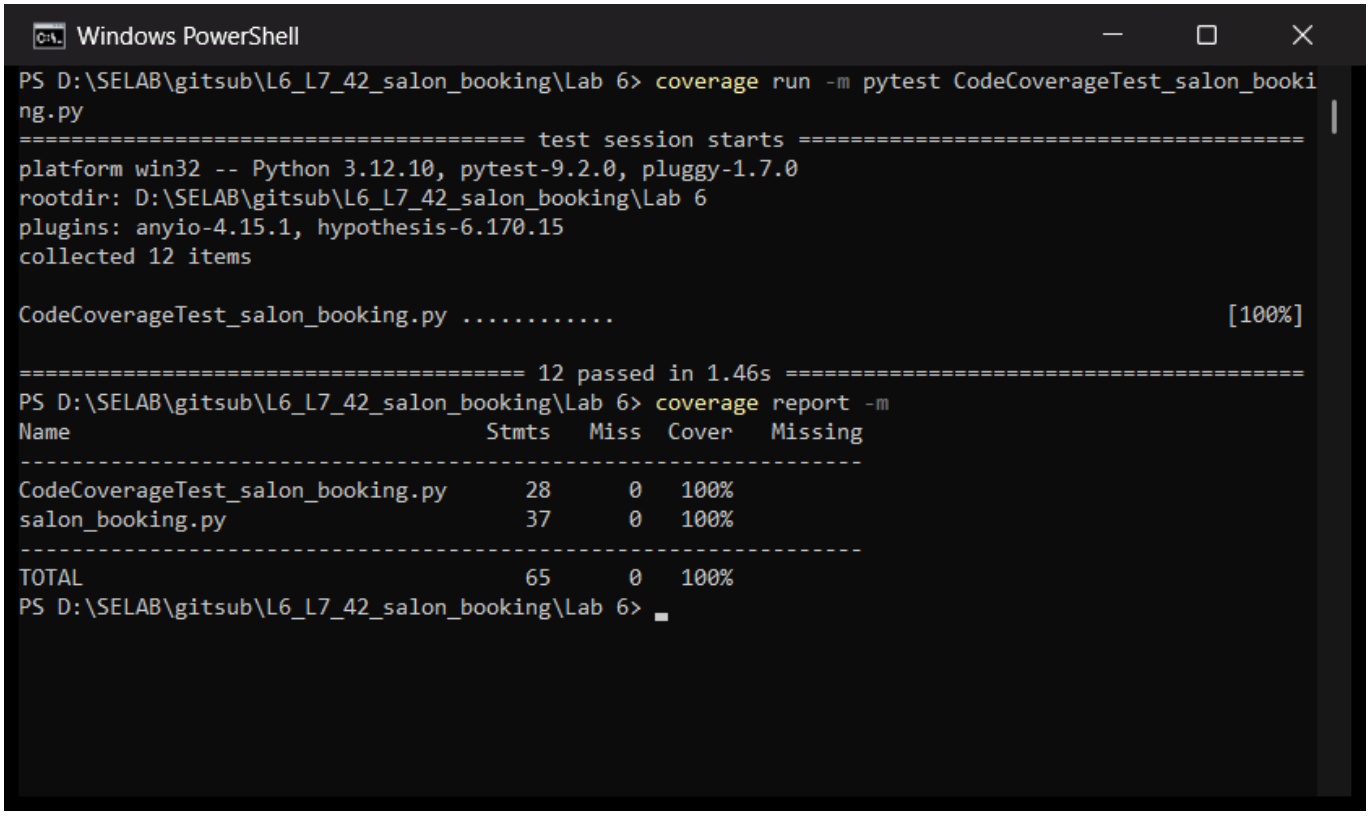

Summary

Test file	Tests	Line coverage of salon_booking.py	Branch coverage of salon_booking.py
test_salon_booking.py (starter)	2	38%	32%
CodeCoverageTest_salon_booking.py	12	100%	98% (missed 21->23)
BranchCoverageTest_salon_booking.py	24	100%	100% (26/26 branches)

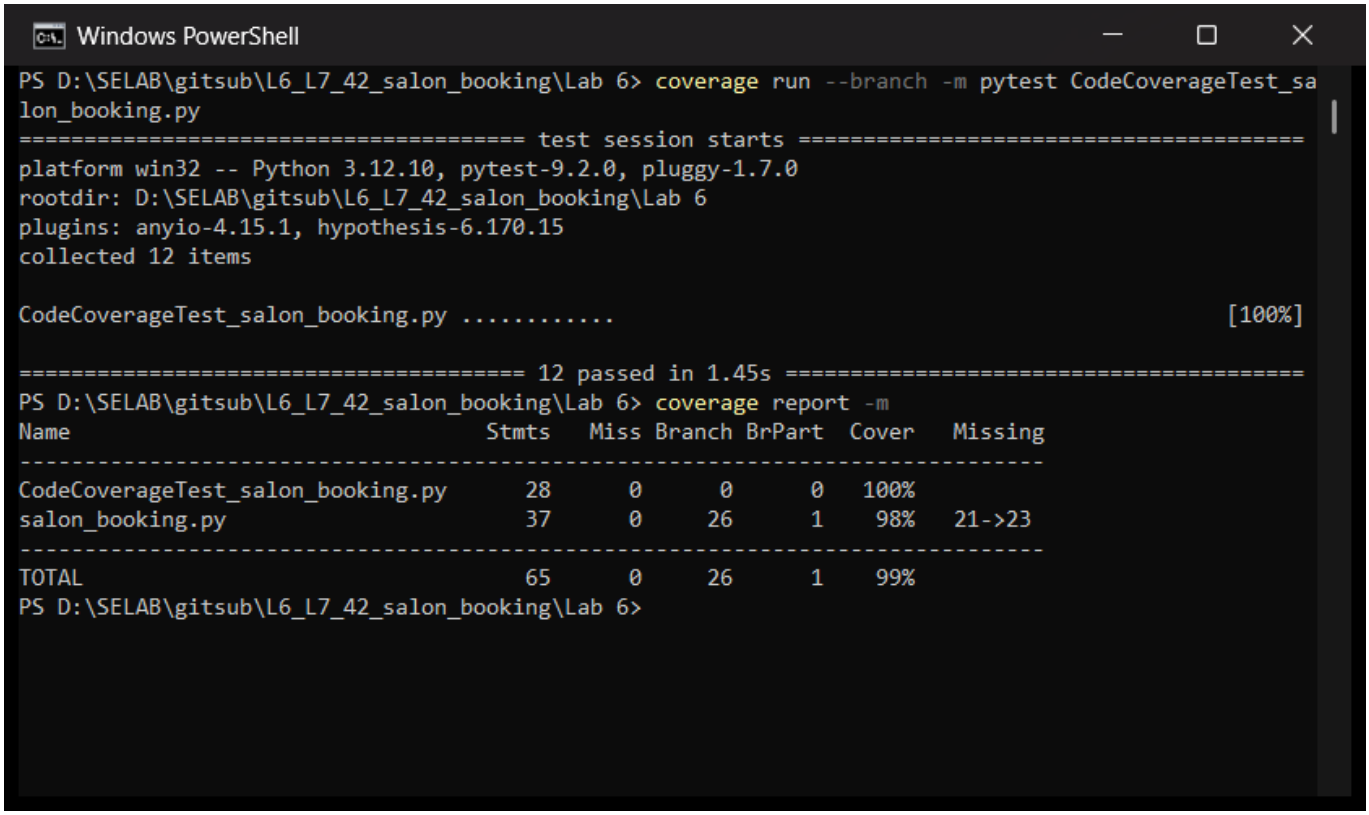

The code coverage tests execute every line, but never take the path where a long overrun (extra > 60 min) is done by a non-senior stylist, so the decision at line 21 is never False. The branch coverage tests drive every if/elif/else to both outcomes and add boundary values (duration 0, extra exactly 0 and 60, walk-in party of 2 and 3, party of 4 with 2 and 3 services, and each arrival cutoff tested at cutoff, cutoff-1, cutoff-15 and cutoff-16 for all colour/weekend combinations).

Commands: `coverage run -m pytest <file>`, `coverage run --branch -m pytest <file>`, `coverage report -m`

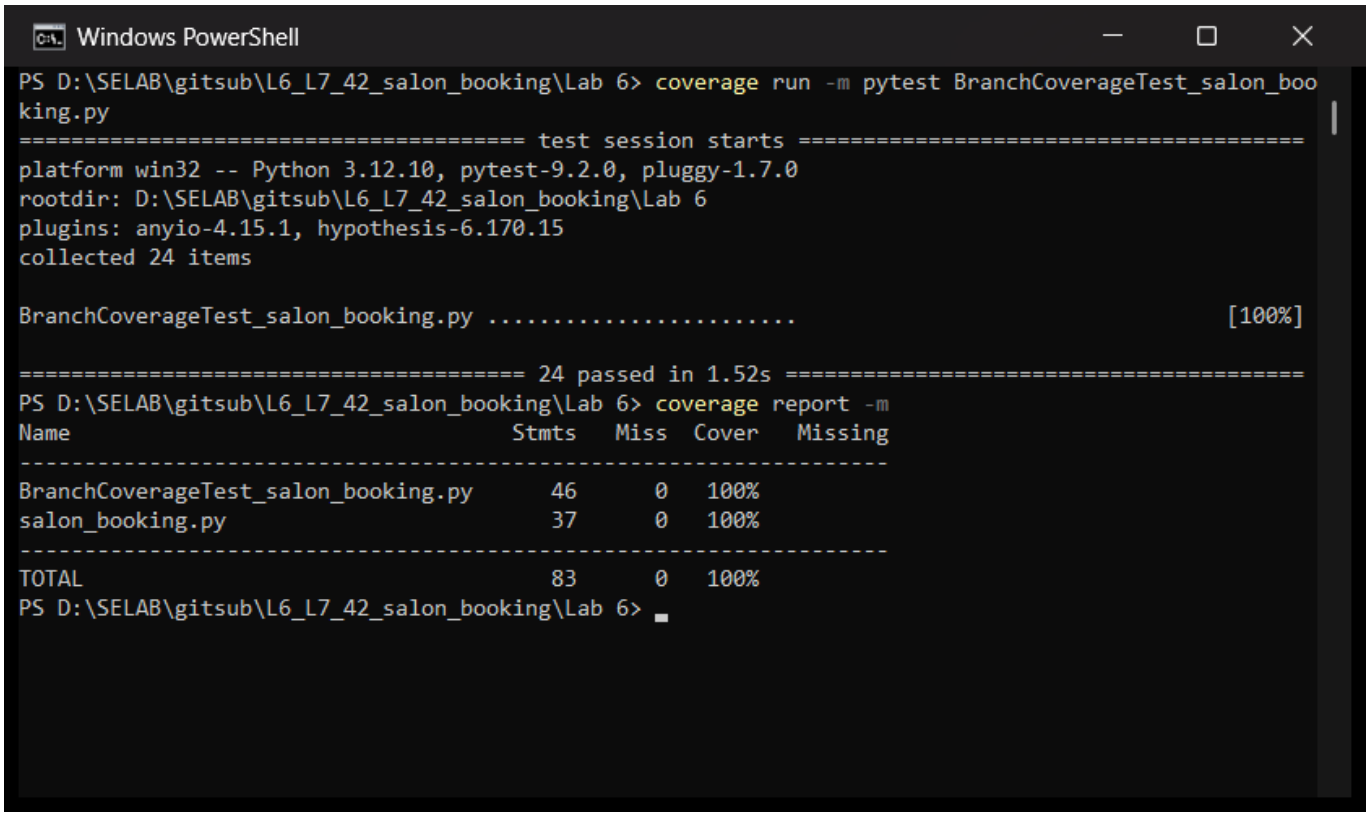

1. Code coverage test cases - line coverage

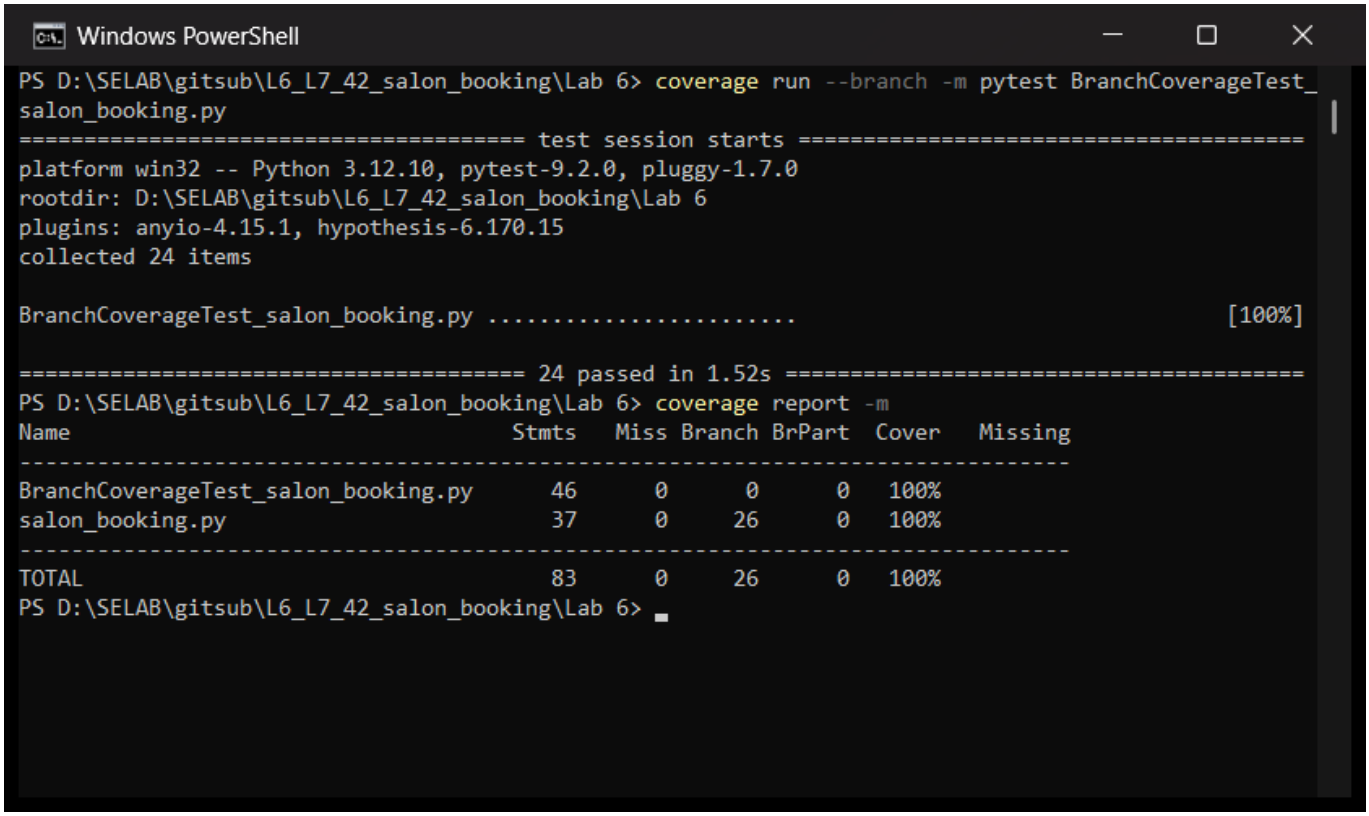

2. Code coverage test cases - branch coverage

Windows PowerShell
PS D:\SELAB\gitsub\L6_L7_42_salon_booking\Lab 6> coverage run --branch -m pytest CodeCoverageTest_salon_booking.py
